Interview Auto-Scheduling Flow

Automated interview coordination using Drupal CMS and n8n workflow automation to eliminate scheduling friction between recruiters, interviewers, and candidates.

Architecture Overview

Drupal CMS

Central data repository managing interview requests, participant details, and slot preferences

n8n Automation

Workflow orchestration handling triggers, calendar checks, and slot generation logic

Calendar APIs

Google Calendar or Outlook integration for real-time availability verification

Made with GAMMA

Step 1: Workflow Trigger

Trigger Conditions

The n8n automation initiates when specific events occur in Drupal:

- New Interview Request content type is created
- Recruiter manually clicks "Generate Slots" action button
- Manual trigger for testing and development

Technical Implementation

Configure n8n trigger nodes using webhook listeners, API polling mechanisms, or manual execution for controlled testing environments.

Node Options

- Webhook Node
- Polling Node (Drupal GET API)
- Manual Trigger

Made with GAMMA

Step 2: Fetch Interview Details

n8n calls the Drupal REST API endpoint to retrieve comprehensive interview request data including participant information and scheduling requirements.

Interviewer Data

- Full name
- Email address
- Role and department

Candidate Data

- Full name
- Email address
- Contact preferences

Interview Parameters

- Interview type
- Requested date
- Priority level
- Special constraints

Made with GAMMA

Step 3: Generate Available Time Slots

01

Check Working Hours

Verify interviewer availability within standard business hours (9 AM – 6 PM) and configured working schedule

02

Identify Break Times

Account for lunch breaks, recurring meetings, and blocked-off personal time on the calendar

03

Query Existing Bookings

Retrieve all confirmed meetings from Google Calendar or Outlook API to avoid conflicts

04

Apply Buffer Rules

Add configurable buffer time between consecutive interviews (typically 15-30 minutes)

05

Calculate Duration

Factor in interview type duration requirements (30, 45, or 60 minutes)

06

Generate Slot List

Compile all available time windows that satisfy the complete constraint set

Made with GAMMA

Step 4: Store Slots in Drupal

Data Persistence Strategy

Before sending notifications, n8n writes the generated time slots back to Drupal via POST API, ensuring data integrity and enabling audit trails.

Stored Information

- Complete list of available slot options
- Unique token/ID for each individual slot
- Timestamp of generation
- Selection UI metadata

Made with GAMMA

Steps 5-6: Interviewer Selection

1

Email Dispatch

Drupal sends automated email to interviewer with all available time slots and a secure link to the selection interface

2

Slot Review

Interviewer accesses Drupal interface or email-embedded buttons to review the generated options

3

Preference Selection

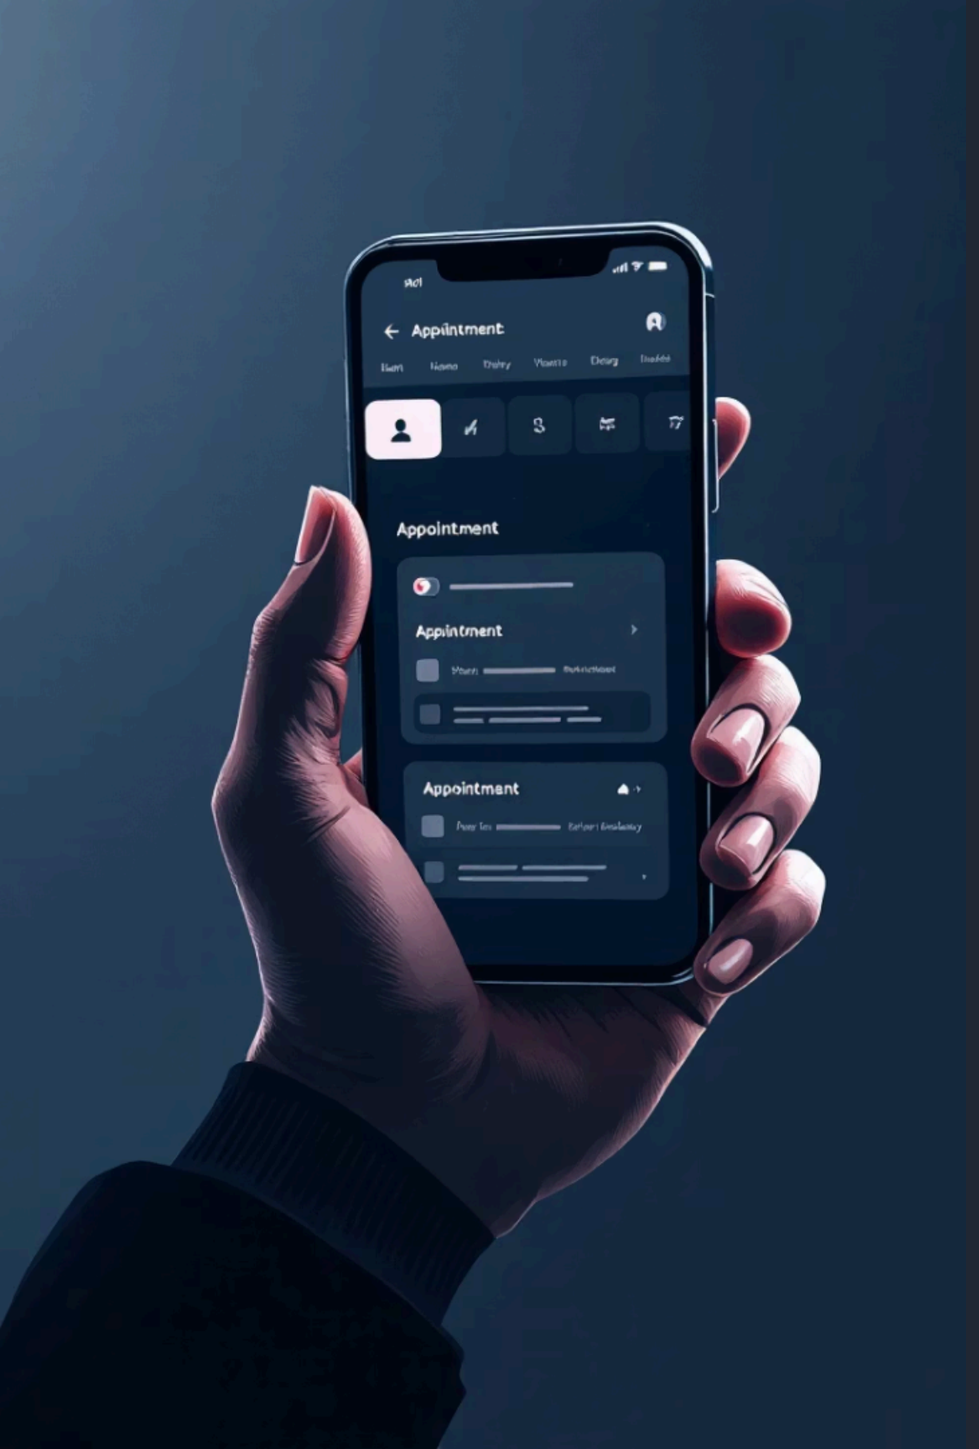
Interviewer selects 2–3 preferred time slots that best fit their schedule and priorities

4

Update Trigger

Drupal updates the Interview Request node, triggering webhook notification to n8n or API polling detection

Made with GAMMA



Steps 7-8: Candidate Selection

Refined Options Sent

Drupal dispatches email or WhatsApp message to candidate containing only the interviewer-approved slot list, reducing cognitive load and decision complexity.

Single Slot Choice

Candidate reviews the 2-3 pre-filtered options and selects exactly one final time slot that works for their schedule.

Final Update

Candidate selection is saved in Drupal, updating the interview record status and triggering the final confirmation workflow in n8n.

Made with GAMMA

Step 9: Multi-Party Confirmation

Confirmation Recipients

- Candidate
- Interviewer
- HR team
- Recruiting coordinator

Delivery Methods

Email with calendar invite, SMS notification, and in-app Drupal notification

Confirmation Contents

Meeting Details

Finalized date, time, and duration with timezone information

Access Information

Google Meet or Microsoft Teams meeting link with dial-in options

Calendar Invite

Attached .ics file for automatic calendar import and reminders

Made with GAMMA

Implementation Benefits

75%

Time Saved

Reduction in scheduling coordination effort

90%

Conflict Reduction

Fewer double-bookings and scheduling errors

3x

Faster Scheduling

Speed improvement from request to confirmation

This automated workflow eliminates back-and-forth emails, reduces human error, ensures calendar accuracy, and delivers a professional candidate experience while freeing recruiters to focus on relationship-building rather than administrative coordination.
